Pizza bakery bad review reasons

- **Late deliveries**
- **Incorrect orders**
- **Poor food quality**
- **Rude customer service**
- High prices compared to quality
- Complicated ordering process
- Poor packaging
- Lack of transparency regarding ingredients or allergens
- Unreliable delivery tracking
- Failure to address complaints
- **Only standard pizzas**

Topics

- Using contexts for values
- Using context for lifetime management
- Getting work done
  - Buffering requests without losing them
  - Avoiding goroutine explosions
- New Go 1.22 features: ServeMux patterns, range over numbers, capture loop variable, math/rand/v2

What is a Context?

- “Context carries deadlines, cancellation signals, and other request-scoped values across API boundaries and between processes”
- It is the single most important type in distributed systems
- More reading: https://go.dev/blog/context
