

What's new in Go

March 2026

by Ilija Matoski

cmd/vet: check for missing Err calls for bufio.Scanner and
sql.Rows - <https://github.com/golang/go/issues/17747>
(since 2016)

```
func scanText(r io.Reader) (string, error) {  
    var out string  
  
    s := bufio.NewScanner(r)  
    for s.Scan() {  
        out += s.Text()  
    }  
  
    // Missing check for s.Err()  
    return out, nil  
}
```

spec: direct reference to embedded fields in struct literals - <https://github.com/golang/go/issues/9859> (since 2015)

```
type E struct {  
    A int  
}
```

```
type T struct {  
    E  
}
```

This works:

```
T{E: E{A: 1}}
```

This does not:

```
T{A: 1}
```

cmd/go: change `go mod init` default go directive back to 1.N - <https://github.com/golang/go/issues/77653>

- In Go 1.26, go mod init started setting the go version in go.mod to an older version instead of the current toolchain.
- This improves compatibility across supported Go versions.
- However, developers report it is confusing and prevents automatic use of latest language features.
- Proposal #77653: change the default back to the current Go version (1.N) when initializing modules.

cmd/go: change `go mod init` default go directive back to 1.N - <https://github.com/golang/go/issues/77653>

```
> cat t.go
package main

import "fmt"

func main() {
    fmt.Println(new(42))
}

> go run t.go
0x4a524480c0b0

> go mod init t
go: creating new go.mod: module t
go: to add module requirements and sums:
    go mod tidy

> go build
# t
./t.go:6:14: new(42) requires go1.26 or later (-lang was set to go1.25; check go.mod)
```

spec: generic methods for Go -

<https://github.com/golang/go/issues/77273>

- Currently
 - Functions can be generic; methods cannot declare type parameters.
 - Methods are treated mainly as tools to implement interfaces.
- New:
 - Methods are also for namespacing and readability (`x.a().b()`), independent of interfaces.
 - Generic *concrete* methods are useful even if they never implement interfaces.
- Impact
 - Fully backward-compatible.
 - Compiler: mostly relaxation + export format update.
 - Tools: need updates, but no fundamental new concepts.

spec: generic methods for Go -

<https://github.com/golang/go/issues/77273>

// Old

FunctionDecl = "func" FunctionName [TypeParameters] Signature [FunctionBody] .

// New

FunctionDecl = "func" [Receiver] identifier [TypeParameters] Signature [FunctionBody] .

spec: generic methods for Go -

<https://github.com/golang/go/issues/77273>

```
type S struct{}
```

```
func (S) M[T any](v T) {}
```

```
var s S
```

```
s.M(10) // infer T
```

```
s.M[int](5) // explicit
```

spec: generic methods for Go -

<https://github.com/golang/go/issues/77273>

```
type S struct{}
```

```
func (S) M[T any](v T) {}
```

```
var s S
```

```
s.M(10) // infer T
```

```
s.M[int](5) // explicit
```

That's all folks!
